

MAPNA Group is an industrial enterprise that consists of the parent company, MAPNA Group Company, and more than 40 subsidiaries. The company's business lines are diverse, including: engineering, construction and development of thermal & renewable power plants, combined heat and power (CHP) utilities, combined power generation and water desalination plants, engineering, execution and development of offshore and onshore oil & gas projects, execution of rail transportation projects, electrification, medical imaging services, operation, repair and maintenance services, and financing and investment.

Through development of indigenous knowhow and acquisition of leading-edge technology, MAPNA Group designs and manufactures a wide range of advanced industrial machinery including: gas and steam turbines, wind turbines, turbine spare parts, blades and vanes, conventional boilers and heat recovery steam generators, thermal and hydro-generators, turbo compressors, control and safety systems, passenger and freight locomotives, and operation and maintenance services at world-class level.

Fifty percent of Iran's power capacity has been developed by MAPNA Group. MAPNA is also a major player in Iran's oil & gas and rail industries. High quality and competitive prices have helped our corporation to take an active role in the Middle East, North Africa, and Southeast Asia market.

MAPNA Group was established under the title "Iran Power Plant Projects Management Company" in August 1993. It began as a general contractor for power plant projects, working under turnkey schemes. The company gradually evolved from a sole contractor in 1990s and licensed producer in the 2000s to a technology owner in the 2010s, currently a leading name in the global gas turbine market.
